

Product Summary

PAX Sierra App

The PAX Sierra App is a TSYS-certified, payments-only application on PAX Android smart terminals that enables secure in-person card acceptance without a full POS system. Delivered and supported by Woodforest Acceptance Solutions, it supports EMV chip, contactless, and magstripe transactions, with processing, receipts, refunds, and settlement handled directly on the device. Designed for merchants with an existing POS, ERP, or manual workflow, Sierra modernizes card-present acceptance without requiring a system replacement, allowing legacy terminals to be upgraded while existing operations remain intact.

Strategic Role in the WAS Portfolio

PAX Sierra fills a critical role within the WAS portfolio as a core card-present payments solution, not a commerce or POS platform. It allows WAS and its partners to support merchants who want modern Android-based payment acceptance without adopting new business software or changing operational workflows.

Who It's Built For

- Retailers happy with their existing POS or register
- Service and field-based businesses collecting payment on site
- Cafes and light QSR environments using external registers
- Healthcare and professional offices collecting copays or balances
- B2B counters and commercial environments tied to ERP or invoicing systems

Core Use Cases

- Modernizing Legacy Payment Terminals
- Payments Without POS Replacement
- Secure, COMPLIANT Card-Present Payments
- Getting Paid at the Point of Service

Platform Differentiation

Unlike POS-centric platforms, Sierra is intentionally payments-only, eliminating menus, inventory, employee management, and app marketplaces to reduce cost, training, and operational overhead. Running on modern PAX Android hardware and processing through TSYS under WAS sponsorship, Sierra delivers secure, consistent payment acceptance without merchant-managed infrastructure or custom integrations.

Partner & Merchant Value

For merchants, PAX Sierra upgrades payment acceptance while preserving existing systems, reducing disruption and risk. For partners, it provides a dependable, processor-certified solution that supports a wide range of verticals and legacy environments - while keeping merchants anchored to WAS for future growth.

PAX Sierra is not a POS - it's a modern payment layer that lets merchants keep how they operate, while fixing how they get paid.
