NMI GATEWAY

ONLINE / GATEWAY PAYMENTS INFRASTRUCTURE

NMI is a white-label, processor-agnostic gateway that standardizes payment channels across payment devices. While WAS retains acquiring, settlement, and merchant ownership; NMI gives the flexibility for online/ecommerce payments as well as full gateway platform capability.

WAS ECOSYSTEM FIT

Merchant Frontend

POS, eCommerce, software, devices

NMI

Gateway, tokenization, routing, and reporting layer

WAS

Acquiring, underwriting, settlement, and lifecycle management

Merchant Systems

NMI

WAS (Acquiring & Compliance)

An open, infrastructure-level gateway built for scalable, flexible payment environments—not an all-in-one frontend, POS, or bundled solution.

WHO IT'S FOR

- ✓ Merchants using third-party POS systems or custom software
- ✓ Service businesses with recurring, invoiced, or remote payments
- ✓ ISVs and ISOs embedding payments across diverse merchant portfolios

KEY CAPABILITIES

- ✓ Omnichannel gateway (in-person, online, mobile, MOTO, recurring)
- ✓ Tokenization, vaulting, and recurring billing
- ✓ Centralized reporting across channels, MIDs, and locations

NMI lets WAS support a wide range of payment setups, without forcing platform changes or losing control. It expands who WAS can work with while keeping ownership of underwriting, funding, and the customer relationship.
