

SALEQUICK MOBILE

Mobile-First Payments for On-the-Go and Field-Based Merchants

SaleQuick Mobile is a WAS-supported, mobile-first payment solution that enables merchants to accept card-present and remote payments without a full POS. It supports iOS and Android devices with optional invoicing, pay-by-link, virtual terminal, and recurring billing, and is positioned below full POS platforms like Delta1st.

WHERE IT FITS IN THE WAS ECOSYSTEM

Merchant Mobile Device = Point of interaction (on-the-go acceptance)

SaleQuick Application = Mobile payment and lightweight commerce layer

WAS = Centralized acquiring, processing, funding, and compliance

Mobile Device → SaleQuick → WAS (Acquiring & Compliance)

WHO IT'S FOR

- ✓ Field service and mobile professionals who need to take payments onsite
- ✓ Popup, event, delivery, and on-the-go sellers
- ✓ Small or early-stage businesses that need portable payments, not a full POS

KEY CAPABILITIES

- ✓ Mobile card-present acceptance (EMV, contactless, swipe)
- ✓ Optional remote payment tools (virtual terminal, invoicing, pay-by-link, recurring billing)
- ✓ Lightweight reporting and reconciliation through WAS

- ➔ This is a mobile-first, payments-centric solution designed to help merchants get paid anywhere. Not a full POS, inventory system, or operational system of record and not a replacement for Delta1st.
- ➔ **SaleQuick serves** as a mobile and early-stage entry point into the WAS ecosystem, allowing partners to onboard merchants quickly and cost-effectively. As merchants grow in operational complexity, SaleQuick creates a natural progression to more advanced WAS platforms without forcing premature POS adoption.
